

VISWANADH GANTI

Full Stack Developer & Technical Lead — Java | Spring Boot | React.js | Cloud (OpenShift/AWS)

Hyderabad, Telangana, India | +91 7075452889 | viswanadh.ganti@outlook.com | linkedin.com/in/viswanadhganti

PROFESSIONAL SUMMARY

Full stack engineer with 8 years building enterprise Java systems, including 4+ years delivering backend services for IBM's MREF (formerly TRIRIGA) facilities-management platform, and prior experience leading a Java engineering team as Technical Lead at Wipro. Strong foundation across Spring Boot, Hibernate, SQL/Oracle, React.js, and containerized deployment on OpenShift/AWS, backed by hands-on delivery in Git, Maven/Gradle, Jenkins CI/CD, and JIRA-driven Agile teams. Experienced owning services end-to-end — from API design and security remediation through cloud deployment — on large-scale, mission-critical systems including FedEx's Integrated Sortation System. Looking to grow into broader technical leadership on a product-engineering team at a large-scale technology company.

CORE COMPETENCIES

Languages & Frameworks: Java, Spring, Spring Boot, Hibernate, React.js, JavaScript

Cloud & DevOps: OpenShift, AWS, Docker/Podman, Jenkins, CI/CD, Maven/Gradle, Git

Data: SQL, Oracle Database, JDBC, Relational Data Modeling

Practices & Leadership: Agile/Scrum, JIRA, Sprint Planning, Code Review Standards, Mentoring, Unit Testing, TDD, Multithreading

Domain Expertise: IBM MREF/TRIRIGA (Facilities & Real Estate Management), Logistics Systems, Application Security (OWASP, XSS remediation)

PROFESSIONAL EXPERIENCE

Back End Developer — IBM

Nov 2023 – Present

- Contribute to IBM MREF (Maximo Real Estate and Facilities, formerly TRIRIGA), an enterprise facilities and real-estate management platform deployed at large global organisations. Delivered 340+ commits spanning feature development, security hardening, dependency management, and customer defect resolution across more than 50 work items since 2022.
- Led end-to-end remediation of reflected Cross-Site Scripting (XSS) exposures across multiple high-traffic UI surfaces including the status bar, form builder, list value picker, and data-map editor. Configured a continuous static-analysis pipeline with custom sanitizer rules and per-pull-request scanning, reducing the noise-to-signal ratio of security scan results across the codebase.
- Resolved multiple critical third-party library vulnerabilities by upgrading mail, JSON serialisation, RPC, and logging dependencies to patched versions, closing open security findings and preventing large-payload processing failures in production. Diagnosed and fixed enterprise customer-reported defects spanning workflow activation, data-import failures, and field behaviour regressions.
- Optimised AES encryption throughput for reversible password fields by re-architecting single-record processing into a parallel batch pipeline, significantly reducing re-encryption runtime for large datasets. Exposed the correct product version in the Admin Summary UI and server logs, and resolved a mismatch between the UI display and the REST API version response.
- Hardened email transport security by enabling SSL hostname verification and completing a mail-library migration to close an insecure-authentication protocol finding. Improved static-analysis hygiene by excluding third-party dependency directories from scans, eliminating false-positive noise across all pull requests. Delivered all work within containerised OpenShift and AWS deployment pipelines using Git and Jenkins CI/CD.

Technical Lead — Wipro Limited

Jul 2023 – Oct 2023

- Led technical delivery for a Java engineering team embedded in the TRIRIGA platform programme, coordinating design decisions, code-quality standards, and sprint planning via JIRA.
- Oversaw delivery of accessibility compliance work targeting WCAG 2.1 requirements for a major financial-sector client, covering keyboard navigation, screen-reader announcements, and semantic HTML correctness across the reporting module.

Senior Software Engineer — Wipro Technologies

Aug 2021 – Aug 2023

- Delivered security and stability fixes across the TRIRIGA platform as a senior contributor: patched open-source library vulnerabilities (Apache FOP, Eclipse compiler JARs, icu4j, Apache Commons Collections, SonarQube task JARs) identified through OWASP and open-source scans; resolved reflected XSS attack vectors in the platform core; and upgraded the bundled Liberty application server to a current release. Mentored junior engineers and drove code-review standards.

- Resolved 10+ customer-reported production defects (APARs) covering data localisation, unit-of-measure field regressions, OSLC date formatting, report Excel-template rendering, property-tree pagination, BIM Connector warnings, and meeting-occurrence count mismatches — directly improving reliability for enterprise clients. Partnered with architects and product stakeholders to translate business requirements into scalable technical designs.

Project Engineer — Wipro Limited

Nov 2018 – Aug 2021

- Built and maintained modules for the Integrated Sortation System (ISS), an automated package-sorting platform running across FedEx Ground facilities.
- Developed and deployed code-upgrade patches for a high-throughput, mission-critical production system using Git and Maven, gaining hands-on depth in multithreading, JDBC, and SQL query optimization.

Intern — Hiferk Technologies Pvt. Ltd.

Dec 2017 – Mar 2018

- Contributed to development of an Online Recruitment System web application, gaining early full stack web development experience.

TECHNICAL WRITING

- Authored a LinkedIn technical article on IBM MREF Date/DateTime configuration, including an accompanying decision-guide graphic for practitioners.

EDUCATION

Bachelor of Technology, Computer Science — GMR Institute of Technology (2014 – 2018)

CERTIFICATIONS

Generative AI: Introduction and Applications • 2025 IBMer watsonx Challenge
